

FOR IMMEDIATE RELEASE

Esquire Innovations' iOffice System 7, previewed at the upcoming ILTA show.

Temecula, CA. August 22, 2008 – Esquire Innovations, Inc. announced that iOffice System 7 will be previewed at the International Legal Technology Association Annual conference August 25-28, 2008. Developed for the legal industry, iOffice System 7 includes: iCreate, templates and formatting tools for document creation and editing; iDocID, for adding document IDs to Word and Excel documents; iRedline, an enhanced word comparison application; and iScrub, for metadata management. iOffice System 7 can be implemented as a complete package, or each product can be purchased separately.

“With seamless Microsoft Office 2007 integration, iOffice System 7 is what you need for efficient document production,” says Randall Farrar, Esquire Innovations' CEO.

All of the products leverage Enhanced Native Architecture™ (ENA) a methodology that Esquire developed that leverages native Word functionality, retains the look and feel of parent software dialog boxes, while promoting streamlined workflow and efficiency and reducing end user training requirements.

iCreate: More efficient, standardized document production

iCreate 7 encourages efficient, standardized document creation by providing ways to easily create automated templates for end users, and tools to quickly apply and make changes to styles, numbering and other MS Word formatting elements. Firms that implement iCreate find they significantly reduce the time users spend drafting, formatting and repurposing documents.

Using ENA iCreate retains Word's native formatting, resulting in an electronic document that can effectively be used for collaboration purposes without concern that the formatting will be lost.

Simple to administer, the updating and customization of templates is handled in-house, making upgrades inexpensive and quick to implement. iCreate 7 includes:

- Numerous templates for quick document creation
- Numbering and formatting toolbars for repurposing documents
- A small application footprint
- Open XML document format compliancy
- A sleek new look, with Intelligent, simplified dialog boxes
- XML driven features. Features that were template specific can now be used in any template

- Enhanced contact management integration, including dynamic address updating
- Enhanced administration, more configurable than before.

iDocID: Functionality and flexibility

iDocID 7 provides functionality and flexibility to the process of adding a document ID to a Word or Excel document.

Accessed through a custom ribbon in Office 2007 iDocID features include:

- Footer ID Placement on all pages, first page, second and beyond, and last page
- Footer ID placement specified by document type
- Centralized administration. Firm specifications are set-up in an XML file
- Automatic elimination of existing document identification codes upon File Open
- Existing footer information is never overwritten
- Word and Excel integration
- Out-of-the-box integration with Open Text, Interwoven, NetDocuments and WORLDOX.

iRedline: Practical document comparison tools

By taking advantage of XML technology, iRedline 7 takes a fresh approach to MS Words' native comparison engine by adding the tools and flexibility, law firms require but find unavailable in Words' Compare Document. Features include:

- DMS integration – Right click and compare
- The ability to display the results as tracked changes or static text
- Ability to convert iRedline Changes and DeltaView changes to tracked changes
- Tools to create or email a composite document with the original and revised document embedded to appear at the top of the iRedline result document as icons
- Ability to add a report to result document
- Tri-View layout
- A small application footprint
- A workflow oriented ribbon

iScrub: Premier enterprise-wide application for metadata management

The latest version of iScrub takes metadata management to a new level. Managing metadata involves controlling the information that leaves a firm's electronic walls. iScrub 7 uses sophisticated technologies to remove metadata from MS Office and PDF documents, including the hidden or difficult to reach file elements. By providing centralized administration, iScrub 7 allows firms to establish, protect and control the application settings. In addition, iScrub's simple user interface means easy adoption for users

The latest version of iScrub 7 is designed to work in concert with a firm's e-discovery policies by providing tools to export output into XML format. Features include:

- A sleek new look, even faster removal of metadata from MS Word, Excel, PowerPoint and PDF documents
- A small application footprint
- A built-in management module for easy configuration
- A metadata viewer for Word, Excel and PowerPoint
- The ability to output metadata information in XML format – useful for e-discovery applications
- An unlimited number of metadata management levels
- Ability to cleans files that are contained within Zip folders and to Zip files after cleaning
- Batch metadata removal
- Ability to save documents in a PDF format after cleaning.
