Esquire Innovations Releases iHyperstyles

iHyperstyles simplifies style formatting and automatic numbering to a single click

Temecula, CA – September 20, 2006 - Esquire Innovations, Inc., a leading provider of Microsoft Office integration software services and applications for the legal market, today announced the release of iHyperstyles, a software tool that makes it easy to apply, modify, and manage paragraph numbering and styles within Microsoft Word, establishing consistent work quality across the law firm.

Microsoft Word's out of the box-styles often do not meet the needs of sophisticated users. iHyperstyles, a component of iCreate, Esquire's popular template and macro product, makes the use of styles more compelling by simplifying style formatting and automatic numbering to a single click. Styles become easy to train and apply for users of all skill levels. With a minimal amount of training, users can be formatting styles without a lot of background knowledge or experience. iHyperstyles enhances Word's native architecture so document sharing and collaboration are not impacted at all.

The latest release of iHyperstyles enables the creation of multiple number schemes in documents. The Title Marks feature automates the insertion of hidden paragraph marks and soft returns, and cleanup of manually typed paragraphs.

"iHyperstyles makes the application, modification, and creation of styles a seamless process," stated Wendy Voigt, Document Support Analyst, with Minneapolis-based Lindquist & Vennum PLLP. "Educating users on styles is part of my job, and with the help of iHyperstyles, training couldn't be easier. With iHyperstyles automation, inserting Title Marks and creating a Table of Contents becomes a simple task, no matter the document size."

iHyperstyles is included in the popular iOffice System product suite which includes iCreate, iScrub, the premier metadata management utility for Microsoft Office documents, and iDocID, a universal document management system-integrated ID stamper.

"Law firms and businesses have the need to easily modify styles within Microsoft Word. iHyperstyles was developed to meet this need," said Randy Farrar, Chief Software Architect, Esquire Innovations, Inc.
