Esquire Innovations Releases iOffice System Enhancement Pack 6 (EP6) *iOffice EP6 legal desktop suite provides one-stop for firms' document production needs*

Temecula, CA – November 8th 2005 - Esquire Innovations, Inc., a leading provider of Microsoft Office integration software services and applications for the legal market, today announced the release of iOffice System EP6, the legal industry's first comprehensive and integrated system for document creation, formatting, re-purposing, comparing and metadata management. The new offering, a bundled package of Esquire's flagship document production tools including iCreate and iScrub, is designed to work hand-in-hand with the Microsoft Office suite.

iOffice System EP6 builds on the already powerful iOffice System by enhancing the core applications: iCreate, a popular template and macro product; iScrub, the premier metadata management utility for Microsoft Office documents; iRedline, a redlining tool for Microsoft Word and Excel, and iDocID, a universal document management system-integrated ID stamper.

Esquire Innovations' latest offering provides clients with a suite of useful and innovative software applications and services, designed to increase document production productivity, decrease deployment costs, and provide a single source for all document production tools.

Key features and benefits of Esquire Innovations' iOffice System EP6 include:

- iCreate: Decreased implementation times and costs associated with a template production application; more styles and numbering functionality added to the iHyperStyles application;
- iScrub: Increased metadata management based on email and PDF metadata removal; includes dynamic scrubbing and expandable user accessible interface;

- iRedline: Improved redlining speed with more conditioning options for difficult Microsoft Word documents; works with Track Change and DeltaView documents by accepting and rejecting changes, building change reports and converting iRedline or DeltaView documents back into a Track Changes document;
- iDocID: Enhanced integration with Hummingbird and Interwoven Document Management Systems; Insert, format, control or remove document ID information in MS Word files.

“Our firm was looking for a document automation suite that would help us reinforce our technology education plans for using Word, deploy changes faster, and improve productivity when creating documents; we believe we have accomplished that with the iOffice Suite,” stated Jeff Farkas, Director of Information Technology, Roetzel & Andress.

“Significant changes have occurred in speed and simplification of template and style creation, and metadata management. Most mid to large size firms can implement the iOffice System in less than a month, compared to six months and longer roll-outs we find so many firms struggling with today,” states Randy Farrar, Chief Software Architect, Esquire Innovations, Inc. “iOffice EP6 is powerful, simple to use, and provides a true integration with existing Microsoft Office applications.”
